Clone (Copy) a Protocol

1. Log into eProtocol with your net ID and password

2. Click on the IBC tab to see your investigator Homepage for IBC submissions.

3. Click on the Clone Protocol button.

4. Select the protocol to clone using the radio button next to the Protocol ID and click on the Clone Protocol button.

5. Click on the Yes button in the popup that appears.

Do you want to clone the selected Protocol?

Yes  No

6. eProtocol will return you to the Investigator Homepage and on it will be a note providing the protocol number of the new protocol that was created by cloning the protocol that was selected. For example: Protocol 23-01-7958 is created by cloning protocol 20-01-5444.
